

TECHNICAL REPORT STANDARD PAGE

1. Report No. FAA/LA-93/269		2. Government Accession No.		3. Recipient's Catalog No.	
4. Title and Subtitle Louisiana Airport System Plan Measures of Performance		5. Report Date July 1992			
		6. Performing Organization Code			
7. Author(s) Mahmoud S. Abbas Ph.D., P.E.		8. Performing Organization Report No. 269			
9. Performing Organization Name and Address Louisiana Transportation Research Center 4101 Gourrier Avenue Baton Rouge, LA 70808		10. Work Unit No.			
		11. Contract or Grant No. AIP Project No: 3-22-0000-S9(89) & 3-22-0000-S10(90) State Project No: 780-99-25 & 780-99-26			
12. Sponsoring Agency Name and Address Louisiana Department of Transportation and Development P.O. Box 94245, Capitol Station Baton Rouge, LA 70804-9245		13. Type of Report and Period Covered Final Report April 1990 - July 1992			
		14. Sponsoring Agency Code			
15. Supplementary Notes Conducted in cooperation with the U. S. Department of Transportation, the Federal Aviation Administration, and the Louisiana Department of Transportation and Development					
16. Abstract  This report applies measures of performance to gauge the extent to which the airport system achieves its goals and objectives by the implementation of the Airport System Plan. Measures of Performance are expressed as percentages of the given demographic or economic centers that are being served by a particular class of airports in the state system. Measures of performance are intended to measure the access and intensity of service coverage provided by airports to the population and economic activity areas of the state.					
17. Key Words Measures of Performance, Louisiana Airport System Plan, Airport Access			18. Distribution Statement Unrestricted. This document is available to the public through the National Service, Springfield, VA 22161		
19. Security Classif. (of this report) Unclassified		20. Security Classif. (of this page) Unclassified		21. No. of Pages 176

## **PERFORMANCE MEASURES**

### **INTRODUCTION**

The development of the Louisiana Airport System is guided by its clearly stated goals and objectives. The extent to which the airport system achieves these goals and objectives through the implementation of the Airport System Plan can be gauged by applying measures of effectiveness or performance.

One goal of the Louisiana Airport System is to provide adequate air access to all communities in the state. Measures of performance can be developed to gauge access improvements by comparing access provided by the existing airport system to access provided in the year 2010 through the implementation of the Louisiana Airport System Plan (LASP).

The measures of performance are expressed as percentages of the given demographic or economic centers that are being served by a particular class of airports in the state system. They include the percentage of the state's population served by commercial service airports, the percentage served by transport airports that are capable of accommodating business jet aircraft, and the percentage served by all airports. Other access measures indicate the state's employment, agricultural and mineral production, and total personal income served by these classes of airports.

In addition to measuring access, the intensity of service coverage provided by a particular class of airports to population and economic activity areas of the state has been measured. This is accomplished by identifying all the airports in a given class serving the same area of the state. In Louisiana, some parishes may be served by more than one airport of a given class with a very small degree of overlap of service area (as illustrated in Figure 1a), others may be served by service areas of more than one airport, with a large degree of overlap (as illustrated in Figure 1b). Even though in both cases the parish areas may have complete access to a class of airports, the amount of coverage will be higher in the second case.

### **FUNCTIONAL CLASSIFICATION OF AIRPORTS**

The measures of performance are expressed as percentages of the given demographic or economic centers that are being served by a particular class of airports in the state system. There are three general categories of airports: 1) general aviation; 2) transport; and 3) commercial service. These categories are based on the largest type of aircraft which can use the airport. All airports in the LASP can accommodate general aviation aircraft; therefore, this category includes all system airports. For 1990 there are 69 airports; for 2010, with the addition of Ascension-St. James, Vicksburg-Tallulah, and Plaquemines Parish, there are 72 airports. The new Plaquemines Parish airport at Fort Jackson is currently being evaluated. This location is included in the LASP, but in this document is not included as one of the 71 sites considered. These airports are listed in Table 1a and 1b respectively. Airports which are in the transport category (Figures 1a

and 1b) must meet jet service design standards. Transport airports provide access to turboprop and turbojet business aircraft and most single- and twin-engine piston powered aircraft. Airports designed as transports airports, in general, have runways of sufficient dimensions to accommodate business jets. Transport airports can accommodate transport aircraft and general aviation aircraft. For 1990 there are 27 transport airports (which are listed in Table 2). By 2010, a number of the airports which could only accommodate general aviation aircraft in 1990 will have longer and stronger runways and will be able to accommodate transport aircraft. The 40 transport airports in 2010 are listed in Table 3. As of 1990 there are seven airports providing commercial service flights. This number will remain the same for 2010. These airports can also accommodate transport and general aviation aircraft and are listed in Table 4.

## **METHODOLOGY**

The area of the state served by an airport is indicated by a circle which defines its sphere of influence or service area. The radius of this circle represents the "reasonable" surface access time to reach an airport of a given functional class. For commercial service airports, the radius is 50 miles, which is about 60 minutes of driving time. For general aviation and transport airports the radius is 25 miles, or about 30 minutes of ground travel time.<sup>1</sup>

The population included in an airport service area is determined by inspecting the state map on which the service area is drawn. If the entire parish is covered by the service area, the total population of the parish is considered to have access. If only part of the parish is covered, the population of the covered area is calculated in the following manner:

- 1) The sum of the population of all incorporated areas of the parish covered by the service area is determined;
- 2) Added to that is the sum of the population of the unincorporated area, which is determined by multiplying the percentage of parish land contained in the service area by the unincorporated population of the parish.

## **PERFORMANCE MEASURES**

The performance measures which have been determined for the airports in the Louisiana Airport System Plan are: parish population served by the airport, percent of the parish's area that is covered, and the parish's employment, personal income, and resource values (mineral and agricultural) which are within the access area of the airport. The population contained in each service area is calculated as described in the above methodology section using 1990 Census data for Louisiana cities and parishes.<sup>2</sup> The population for 2010 is derived from population forecasts performed by Woods & Poole Economics.<sup>3</sup> To determine the employment measure, the percentage of parish population contained in the service area of the airport is multiplied by the parish's total employment. Parish employment data are from Woods & Poole Economics.<sup>4</sup> Personal income is estimated by multiplying the parish population included in the service area

of an airport by the parish's per capita income in current dollars. These data are from Woods & Poole Economics.<sup>5</sup> The resource value served is estimated by multiplying the percentage of a parish's land area included in a service area by the parish's agricultural value<sup>6</sup> or mineral value.<sup>7</sup>

## **SUMMARY OF ACCESS TO STATE ACTIVITY CENTERS PROVIDED BY LASP AIRPORTS**

Summaries of the population, employment, personal income, agricultural and mineral values that are served by the three airport classes (commercial service, transport, and general aviation) in 1990 and 2010 are listed in Tables 5 and 6, respectively. These tables list the total population, employment, personal income, agricultural and mineral values for Louisiana in 1990 and 2010 along with the numbers served in each category and the percentage served by the three airport classes. More detailed summaries are provided in the Appendices.

## **ACCESS PROVIDED BY AIRPORTS**

The access provided by the airports in the Louisiana Airport System Plan for 1990 and 2010 has been tabulated in Appendices A1 through A6. These appendices list all the airports and the parishes that are served by each airport. Each airport has a service area with a radius of 25 miles for general aviation and transport airports and 50 miles for commercial service airports. The parishes within these service areas are listed for each airport. The percent of each parish's area covered and population that is served by the airport are listed. The parish's population, employment, mineral and agriculture value, and personal income are provided for each parish within the service area of the airport. These appendices are grouped by functional classifications. Appendix A1 provides these access performance measures for all system airports in 1990 and Appendix A2 is for 2010. Appendices A3 and A4 are for commercial service airports in 1990 and 2010, respectively. Appendices A5 and A6 are for transport airports in 1990 and 2010, respectively.

## **TOTAL COVERAGE FOR LOUISIANA**

Appendices B1 and B2 summarize the total coverage of service provided by airports for each Louisiana parish in 1990 and 2010. The percent of a parish's area covered and the percent of its population served by all system airports, transport airports, and commercial service airports are given for each parish.

**TABLE 5****ACCESS TO STATE ACTIVITY CENTERS PROVIDED BY LASP AIRPORTS**

Amount and Percent of State-wide Activity Centers Served in 1990

	Population	Employment	Personal Income	Agricultural Value	Mineral Value	
Total Amount for Louisiana in 1990	4,219,973	1,981.44	45,970,340.0	1,947,185.0	4,791,045.2	
Scheduled Service:	Amt. Served Percent	4,000,142 94.8%	1,887.32 95.2%	44,076,636.0 95.9%	1,741,444.1 89.4%	4,255,207.5 88.8%

## **PARISHES SERVED**

Appendices C1 through C6 provide more detail on the coverage of service for each Louisiana parish. In addition to the percent of a parish's area covered and the percent of its population served, these appendices provide the population served and the employment, mineral value, agricultural value, and personal income served by airports in each functional classification for each Louisiana parish. These appendices are grouped by functional classifications. Appendix C1 provides these performance measures for parishes served by all system airports in 1990 and Appendix C2 is for 2010. Appendix C3 provides these performance measures for parishes served by commercial service airports in 1990 while Appendix C4 is for 2010. Appendices C5 and C6 are for transport airports in 1990 and 2010.

## **INTENSITY OF COVERAGE**

The intensity of service coverage provided by a particular class of airports to populations and economic activity areas of the state has also been measured. Appendices D1 through D6 list the intensity of coverage provided by each functional classification of airport for every Louisiana parish. For each parish, the airports which have a service area that covers that parish are listed. For each airport that serves the given parish, the percent of the parish's area covered and the percent of the parish's population served by that airport are given. In Louisiana, some parishes may be served by service areas of more than one airport of a given class with a large degree of overlap; others may be served by more than one airport, but with less overlap of service areas. These appendices are grouped by functional classifications. Appendix D1 provides the intensity of coverage from all system airports in 1990. Appendix D2 provides the intensity of coverage from all system airports in 2010. Appendices D3 and D4 provide the intensity of coverage from commercial service airports in 1990 and in 2010. Appendices D5 and D6 provide the intensity of coverage from transport airports in 1990 and 2010, respectively.
